

User Research Report

Project: Fashion E-commerce Mobile Application

Task: User Persona Development

Domain: UI/UX Design

Company: CODTECH IT SOLUTIONS

Created By: Soniya Sahu

1. Introduction

This user research report is created to understand the shopping behavior, needs, expectations, and challenges faced by users while using fashion e-commerce applications. The collected insights help in developing a realistic user persona and improving the overall user experience of the application.

2. Research Objective

The main objectives of this research are:

- Understand online shopping habits of users
- Identify common problems faced during online shopping
- Analyze user expectations from fashion applications
- Improve usability and customer satisfaction

3. Target Audience

Age Group: 18-35 years

User Categories:

- College Students
- Working Professionals
- Regular Online Shoppers

Platform: Mobile Applications

4. Research Methodology

Research Method: User Interview and Observation

Users Analyzed: 10 Participants

Research Type: Qualitative Research

The research focuses on understanding user needs, behaviors, motivations, and frustrations related to online fashion shopping.

5. User Interview Questions

1. How often do you shop online?
2. Which fashion shopping applications do you use?
3. What problems do you face while shopping online?
4. Which features improve your shopping experience?
5. What factors influence your purchase decision?

6. Research Findings

After analyzing user responses, the important findings were:

- Users prefer simple and clean application interfaces
- Most users read reviews before purchasing products
- Size selection is one of the major challenges
- Easy return policies increase user trust
- Discounts and offers strongly influence buying decisions

7. User Needs & Expectations

Users expect:

- ✓ Easy navigation and clean interface
- ✓ Accurate product and size information
- ✓ Multiple secure payment options
- ✓ Fast delivery and simple return process
- ✓ Personalized product recommendations

8. User Pain Points

Common user problems include:

- Confusing size guides
- High delivery charges
- Complicated return process
- Too many irrelevant product options

- Slow application performance

9. Conclusion

The research helped in understanding user behavior, goals, and challenges while using fashion e-commerce applications. These insights were used to create an effective user persona that represents the target audience and helps design a better user experience.
